Vitrified Clay Pipe

gladdingmcbean.com

Today's Clay Pipe Built For Tomorrow

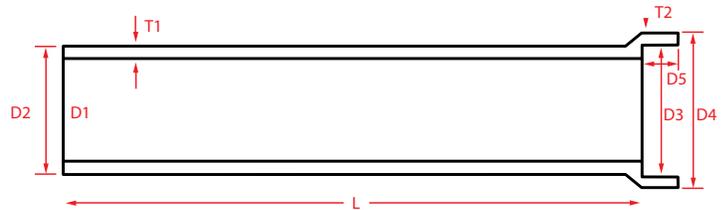

“Vitrified Clay Pipe is the only pipe which offers both a design and service life exceeding 100 years.”

Introduction

Gladding, McBean is a specialty manufacturer of Vitrified Clay Pipe products which are used by contractors and agencies throughout the world. Our state-of-the-art manufacturing processes and technology produces a ceramic product which has great strength, high density and water tight jointing. Vitrified Clay Pipe is the most inert of all sanitary sewer pipe materials. It does not have gradual reduction in strength over time as with resin type products. Chemical resistance likewise does not deteriorate. Vitrified Clay Pipe is the only pipe which offers both a design and service life exceeding 100 years. We have shown standard stock items herein. We typically manufacture non-stock items and non-standard sizes by special order.

Please contact our staff for specific dimension information as all dimensions shown herein are subject to change without notice. Our mission is to provide the optimum level of value, service and quality products to our customers. Our experienced and knowledgeable staff are here to assist in the design and/or installation of your projects.

Couplings, Bushings, and Specifications

Banded Rubber Couplings

Used for the joining of regular or field-cut plain-end vitrified clay pipe to same.

Rubber Coupling
Available in sizes 4" - 12"

Sewer Repair Coupling
Available with outside stainless steel shear
ring sizes 4" - 42"

Torque Wrench
Non-adjustable torque wrench factory set to
60 inch pounds. Accommodates both 5/16
and 3/8 inch fasteners

Transitional Bushings For Rubber Couplings

Used in combination with banded rubber couplings for transitions. From Plain-end vitrified clay pipe to ductile iron pipe, cast iron pipe (CI), PVC pipe (PL) or ABS. Available in sizes 4" - 12".

Specifications

The Vitrified Clay Pipe products manufactured by Gladding, McBean are designed to exceed all applicable requirements of both the ASTM Standards and the "GREENBOOK" Standard Specifications for Public Works Construction.

Below is a table depicting a synopsis of specifications applicable to Vitrified Clay Pipe products. Please contact our staff to request additional information or to obtain a copy of any standard.

SYNOPSIS OF SPECIFICATIONS APPLICABLE TO VITRIFIED CLAY PIPE PRODUCTS

Item	"Green Book" SSPWC	ASTM	AASHTO
1. Specification for strength.	Section 207-8	C700	M65
2. Specification for compression joints.	Section 208-2.3	C425	
3. Specification for perforated pipe.		C700	M65
4. Standard test methods.	Section 207-8.5	C301	
5. Standard installation practice		C12	

Curved Sewer Installations

The design and installation of curved sewer pipelines is common. Bends and curves to accommodate both grade and alignment changes are commonly accomplished by the deflection of straight pipe or by the use of mitered bends, beveling the joints or any combination thereof.

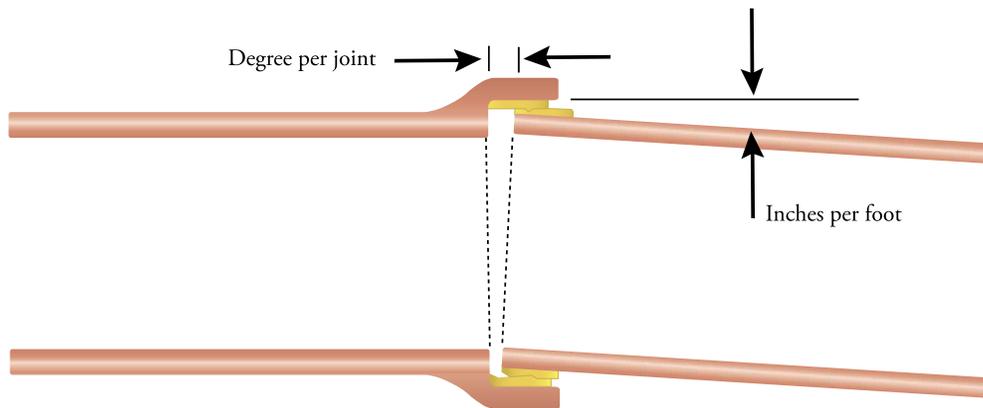

We manufacture mitered bends in sizes 4" to 42" to accommodate any change in angle designed by the engineer. The deflection of standard straight pipe generally provides the required change in grade or alignment. Utilizing shorter pipe lengths decreases the allowable radius. We are providing the following to assist you in such designs.

When it is necessary to use curvilinear alignment due to terrain or to avoid existing structures, the following design and installation criteria may be safely employed:

$$R = \frac{360 \text{ degrees}}{\emptyset \text{ degrees}} \times \frac{L}{2\pi}$$

\emptyset = Allow deflection angle per joint
 L = Length of pipe
 R = Minimum Radius of curvature

NOTE: When \emptyset is maximum R will be minimum.

NOMINAL PIPE SIZE	MAX. DEFL. AT EACH JOINT	APPROX. MAX. DEFL./FT. OF PIPE	MINIMUM RADIUS OF CURVATURE - FEET						
			6' PIPE LENGTH	5-1/2' PIPE LENGTH	5' PIPE LENGTH	4-1/2' PIPE LENGTH	4' PIPE LENGTH	3' PIPE LENGTH	2' PIPE LENGTH

Pipe Joints and Lubricant

Pipe Joints

Our **SPEED SEAL** joints are manufactured from a proprietary design and protected by a registered trademark. **SPEED SEAL** is composed of a two part polyurethane mixture, factory applied to the ends of our pipe. The spigot part of the joint has a smooth surface, whereas the bell portion has a raised ridge.

Our joints are designed not to leak as required by ASTM C 425. We regularly check our joints by an internal hydrostatic test of 10 psig.

We provide a vegetable lubricant to be used when inserting the spigot into the bell. When lubricated and pushed together, the ridge portion of the bell and the spigot casting deform assuring you of a leakproof design by giving a predicted, residual compression around the full circumference of the seal. Our polyurethane formulation is impervious to detergents, acids, alkalis and gasses normally present in sanitary sewer lines.

Shaded areas may be cast in some larger diameter joints, depending on manufacturing method.

SPEED SEAL Lubricant

We provide a vegetable based soap lubricant for use during the assembly of our **SPEED SEAL** joints. The lubricant should be applied full strength to each joint surface immediately prior to assembly, following the removal of all dirt and debris.

Engineering Services

Gladding McBean, in addition to being a manufacturer of Vitrified Clay Pipe, provides professional support to the engineering community and is a resource for technical information during both the design and construction of your project. We will assist agencies with the identification and resolution of construction issues and/or provide information to the contractor to assist in the proper installation of our products.

Plant Tours

Please contact our Engineering Services Department to arrange a tour of our manufacturing plant located in Lincoln, California.

Delivery of Pipe

Gladding McBean primarily utilizes Material Transport for the on-time delivery of our products throughout the western United States

Northern California

601 7th Street

Lincoln, CA 95648

Phone: (916) 645-3341

Fax: (916) 645-9538

Southern California

4301 Firestone Blvd.

South Gate, CA 90280

Phone: (323) 568-1860

Fax: (323) 564-7874

3725 Temescal Canyon Rd.

Corona, CA 92883
